AC 81_Bootcamp

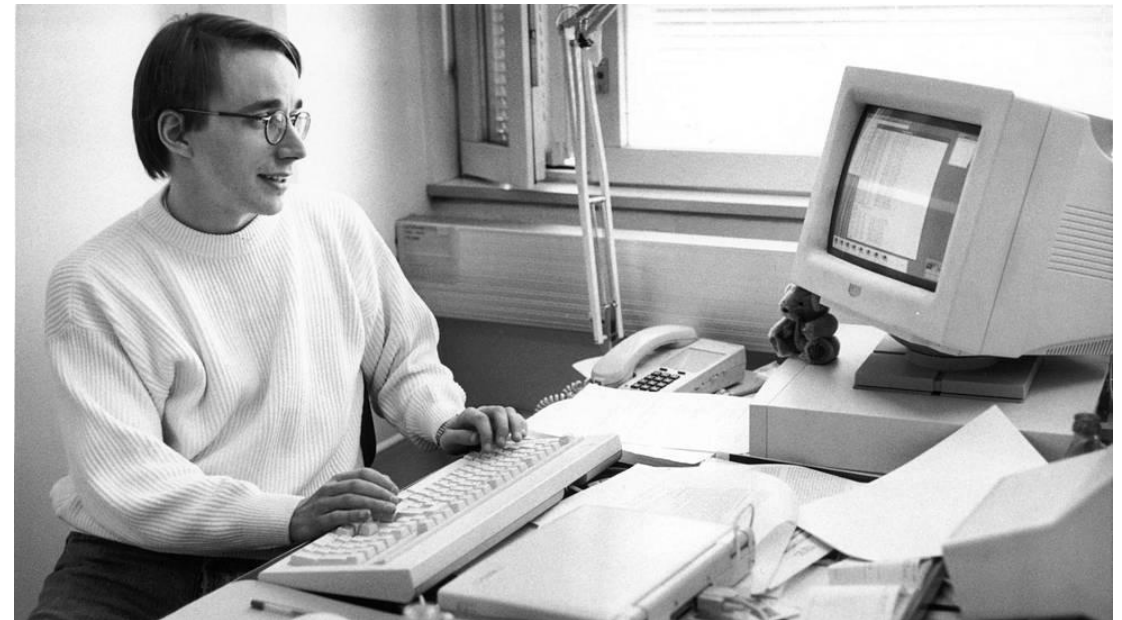

Youth

- Born December 28, 1969, Helsinki, Finland
- Start programming at age 10 on Commodore VIC-20

80`s

- 1988 he entered the Helsinki University to study computer science.
- 1989 – Finnish military service for 11- months
- 1990 – He went back to the university

1991 - Building a new OS

1991

- Posted a message on the internet to alert other users of his OS.
- Available for free with the source code

comp.os.minix

Message from discussion [What would you like to see most in minix?](#)

Linus Benedict Torvalds [View profile](#)

Hello everybody out there using minix -

I'm doing a (free) operating system (just a hobby, won't be big and professional like gnu) for 386(486) AT clones. This has been brewing since april, and is starting to get ready. I'd like any feedback on things people like/dislike in minix, as my OS resembles it somewhat (same physical layout of the file-system (due to practical reasons) among other things).

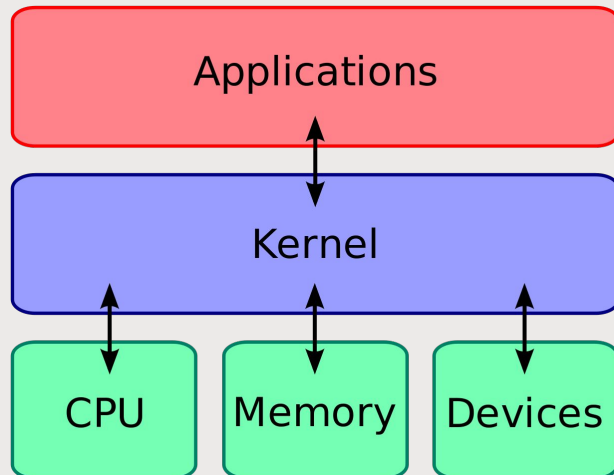

I've currently ported bash(1.08) and gcc(1.40), and things seem to work. This implies that I'll get something practical within a few months, and I'd like to know what features most people would want. Any suggestions are welcome, but I won't promise I'll implement them :-)

Linus (torva...@kruuna.helsinki.fi)

PS. Yes - it's free of any minix code, and it has a multi-threaded fs. It is NOT protable (uses 386 task switching etc), and it probably never will support anything other than AT-harddisks, as that's all I have :-).

GNU / Linux

- Linus Torvalds developed Linux kernel using GNU's development tools.
- Because of their access to the source code, many programmers helped Torvalds retool and refine the software.
- 1994 Linux kernel version 1.0 was released.

GNU

LINUX

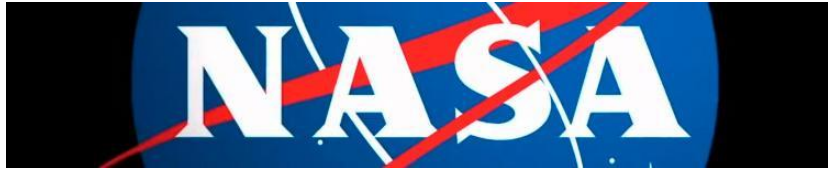

**GNU
+
LINUX**

Common Linux Commands

command	description	command	description	command	description
cd	change directories	find	find something	pwd	present working directory (where am I)
chmod	change read, write, execute (rwx) permissions	grep	find something	rm	remove
chown	change owner	history	history	scp	secure copy
clear	clear	man	manual	ssh	secure shell (remote login)
cp	copy	mkdir	make directory	su	switch users
crontab	cronological listing of jobs	mv	move/ rename	sudo	super user do (override)
df	disk free	netstat	check ports	tar	compress/extract directory
du	disk usage	nslookup	lookup ip address or hostname	touch	Create a file
exit	exit				

Nowadays Linux is pretty much everywhere

- Super Computers
- NASA
- Game Consoles(Steam Machine)
- Smart TVs
- Smartwatches
- Instagram (And Basically The Entire Internet)
- Self Driving Cars (google)
- Washing Machines
- U.S. Department of Defense
- Nuclear submarines

Thank you!
