

STRING BUILDER

String cadet = "Hugo Carvalho"

@ Academia de Código

What is a String in java ?

Java be like:

CaNnOt ReSoLvE sYmBoL
'string'

Is a String really an object?

It is, and, as an object, a String contains a sequence of characters

Once created are immutable

no usages

```
public static void main(String[] args) {  
    char[] str = {'s', 'p', 'o', 't', 'i', 'f', 'y'};  
    String spotify = new String(str);  
    System.out.println(spotify);  
}
```

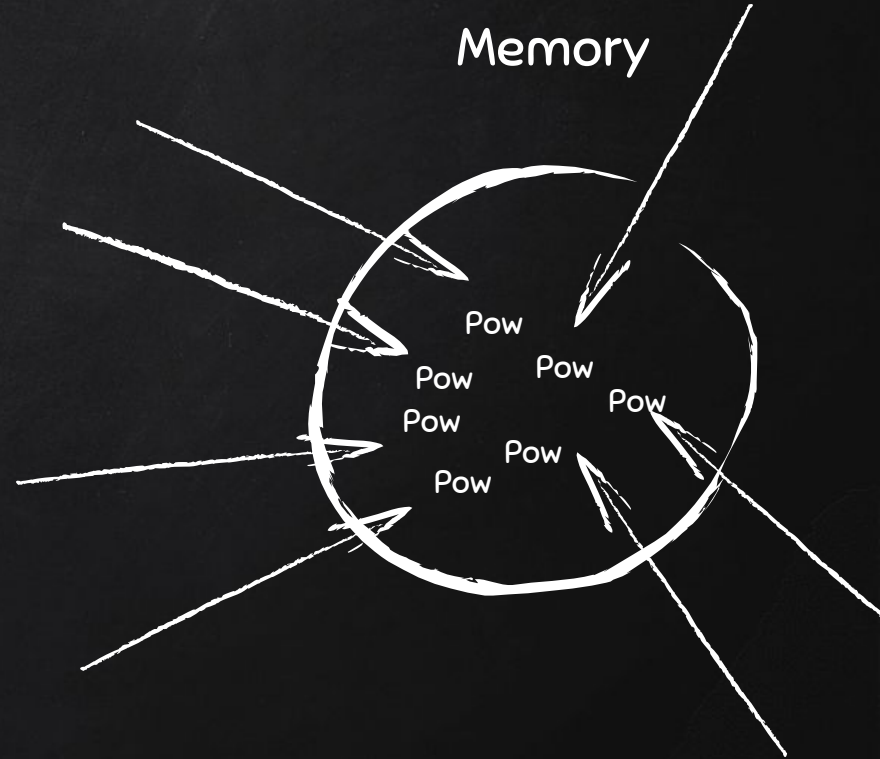

```
String string = new String(original: "Hello World!");
```

STRINGS'N LOOPS

```
String string = "Pow"
```

```
for(int i = 0; i < 10; i++){  
    string = string.concat("Pow");  
}
```

STRING BUILDER

```
String string = "Academia";  
string.concat( str: "de Código");  
System.out.println("String concat created: " + string);  
  
StringBuilder stringBuilder = new StringBuilder("Academia");  
stringBuilder.append("de Código");  
System.out.println("String Builder created: " + stringBuilder);
```

Output:

```
String concat created: Academia  
String Builder created: Academia de Código
```

METHODS

- ✗ `.length()`
returns int value
- ✗ `.insert()`
Inserts a String in a specific index
- ✗ `.charAt()`
returns character at index
- ✗ `.setCharAt()`
Changes the char at a specific index

When I want
to change
value of a String

When I want
to change value
of a StringBuilder

METHODS

- ✗ `.getChars()`
cuts a String and pastes at index
- ✗ `.reverse()`
Reverses the StringBuilder
- ✗ `.delete()`
Deletes the value of the String builder
- ✗ `.capacity()`
sets a max of memory allocated in bits

THANK
YOU!
