First In Last Out

02

Non-Linear Data Structures

The gardener is jesus and the
trees are Us

DFS

BFS

Stack

Queue

My Grandma's Trip

03

Recursion

- Calls an instance of
itself
(divides the problem in
smaller subproblems)

- Base Case
(exit condition)

3!

Stack

```
getFactorial(1)
```

```
if (number === 1) {  
  return 1  
}
```

```
return number * getFactorial(number - 1)
```

Frame

```
getFactorial(2)
```

```
if (number === 1) {  
  return 1  
}
```

```
return number * getFactorial(number - 1)
```

Frame

```
getFactorial(3)
```

```
if (number === 1) {  
  return 1  
}
```

```
return number * getFactorial(number - 1)
```

Frame

Palindromes examples

- sagas
- solos
- stats
- tenet
- wow
- refer
- rotator
- rotor
- kayak
- level
- madam
- mom
- noon
- racecar
- radar
- redder
- repaper

```
output = new KeyValuePair<string, string>();  
string pattern = @"([A-Za-z0-9._-])+([0-9[\\]])*\\={1}<([A-Za-z0-9._-])+";
```

04 RegEx

My first class
was a blast
!!!

Really Fanuca?

And you need a slide to brag about that??
It was my first class too!

RegEx

Regular expressions
define search patterns,
used to find
occurrences in text

The background of the slide is a blurred image of a laptop screen displaying C code. The code includes headers like `<curl/curl.h>` and `<stdio.h>`, and functions like `curl_easy_setopt` and `curl_easy_perform`. Several error messages are visible, such as "Failed to set URL [%s]\n", "Failed to set redirect option [%s]\n", and "Failed to set writer [%s]\n". A large blue rectangular overlay covers the right half of the image.

Thank You!

```
curl_easy_setopt(comm, CURLOPT_URL, url);  
if (curl_easy_perform(comm) != CURLE_OK)  
{  
    fprintf(stderr, "Failed to set URL [%s]\n", errorbuf);  
    return 1;  
}  
  
curl_easy_setopt(comm, CURLOPT_FOLLOWLOCATION,  
                 1);  
if (curl_easy_perform(comm) != CURLE_OK)  
{  
    fprintf(stderr, "Failed to set redirect option [%s]\n", errorbuf);  
    return 1;  
}  
  
curl_easy_setopt(comm, CURLOPT_WRITEFUNCTION,  
                 curl_write_callback);  
if (curl_easy_perform(comm) != CURLE_OK)  
{  
    fprintf(stderr, "Failed to set writer [%s]\n", errorbuf);  
    return 1;  
}
```

The End!
