QUERY

it is a library that simplifies the process....

```
<head>
  <script
    src="https://cdnjs.cloudflare.com/ajax/libs/jquery/2.2.4/jquery.min.js">
  </script>
</head>
```

```
$(document).ready(function() {
    // ...
});
```

DOM MANIPULATION

AJAX

```
function successCallback(response) {
    getCustomers(response);
}

function errorCallback(request, status, error) {
    console.log("Error!")
}

function getCustomers(customer){

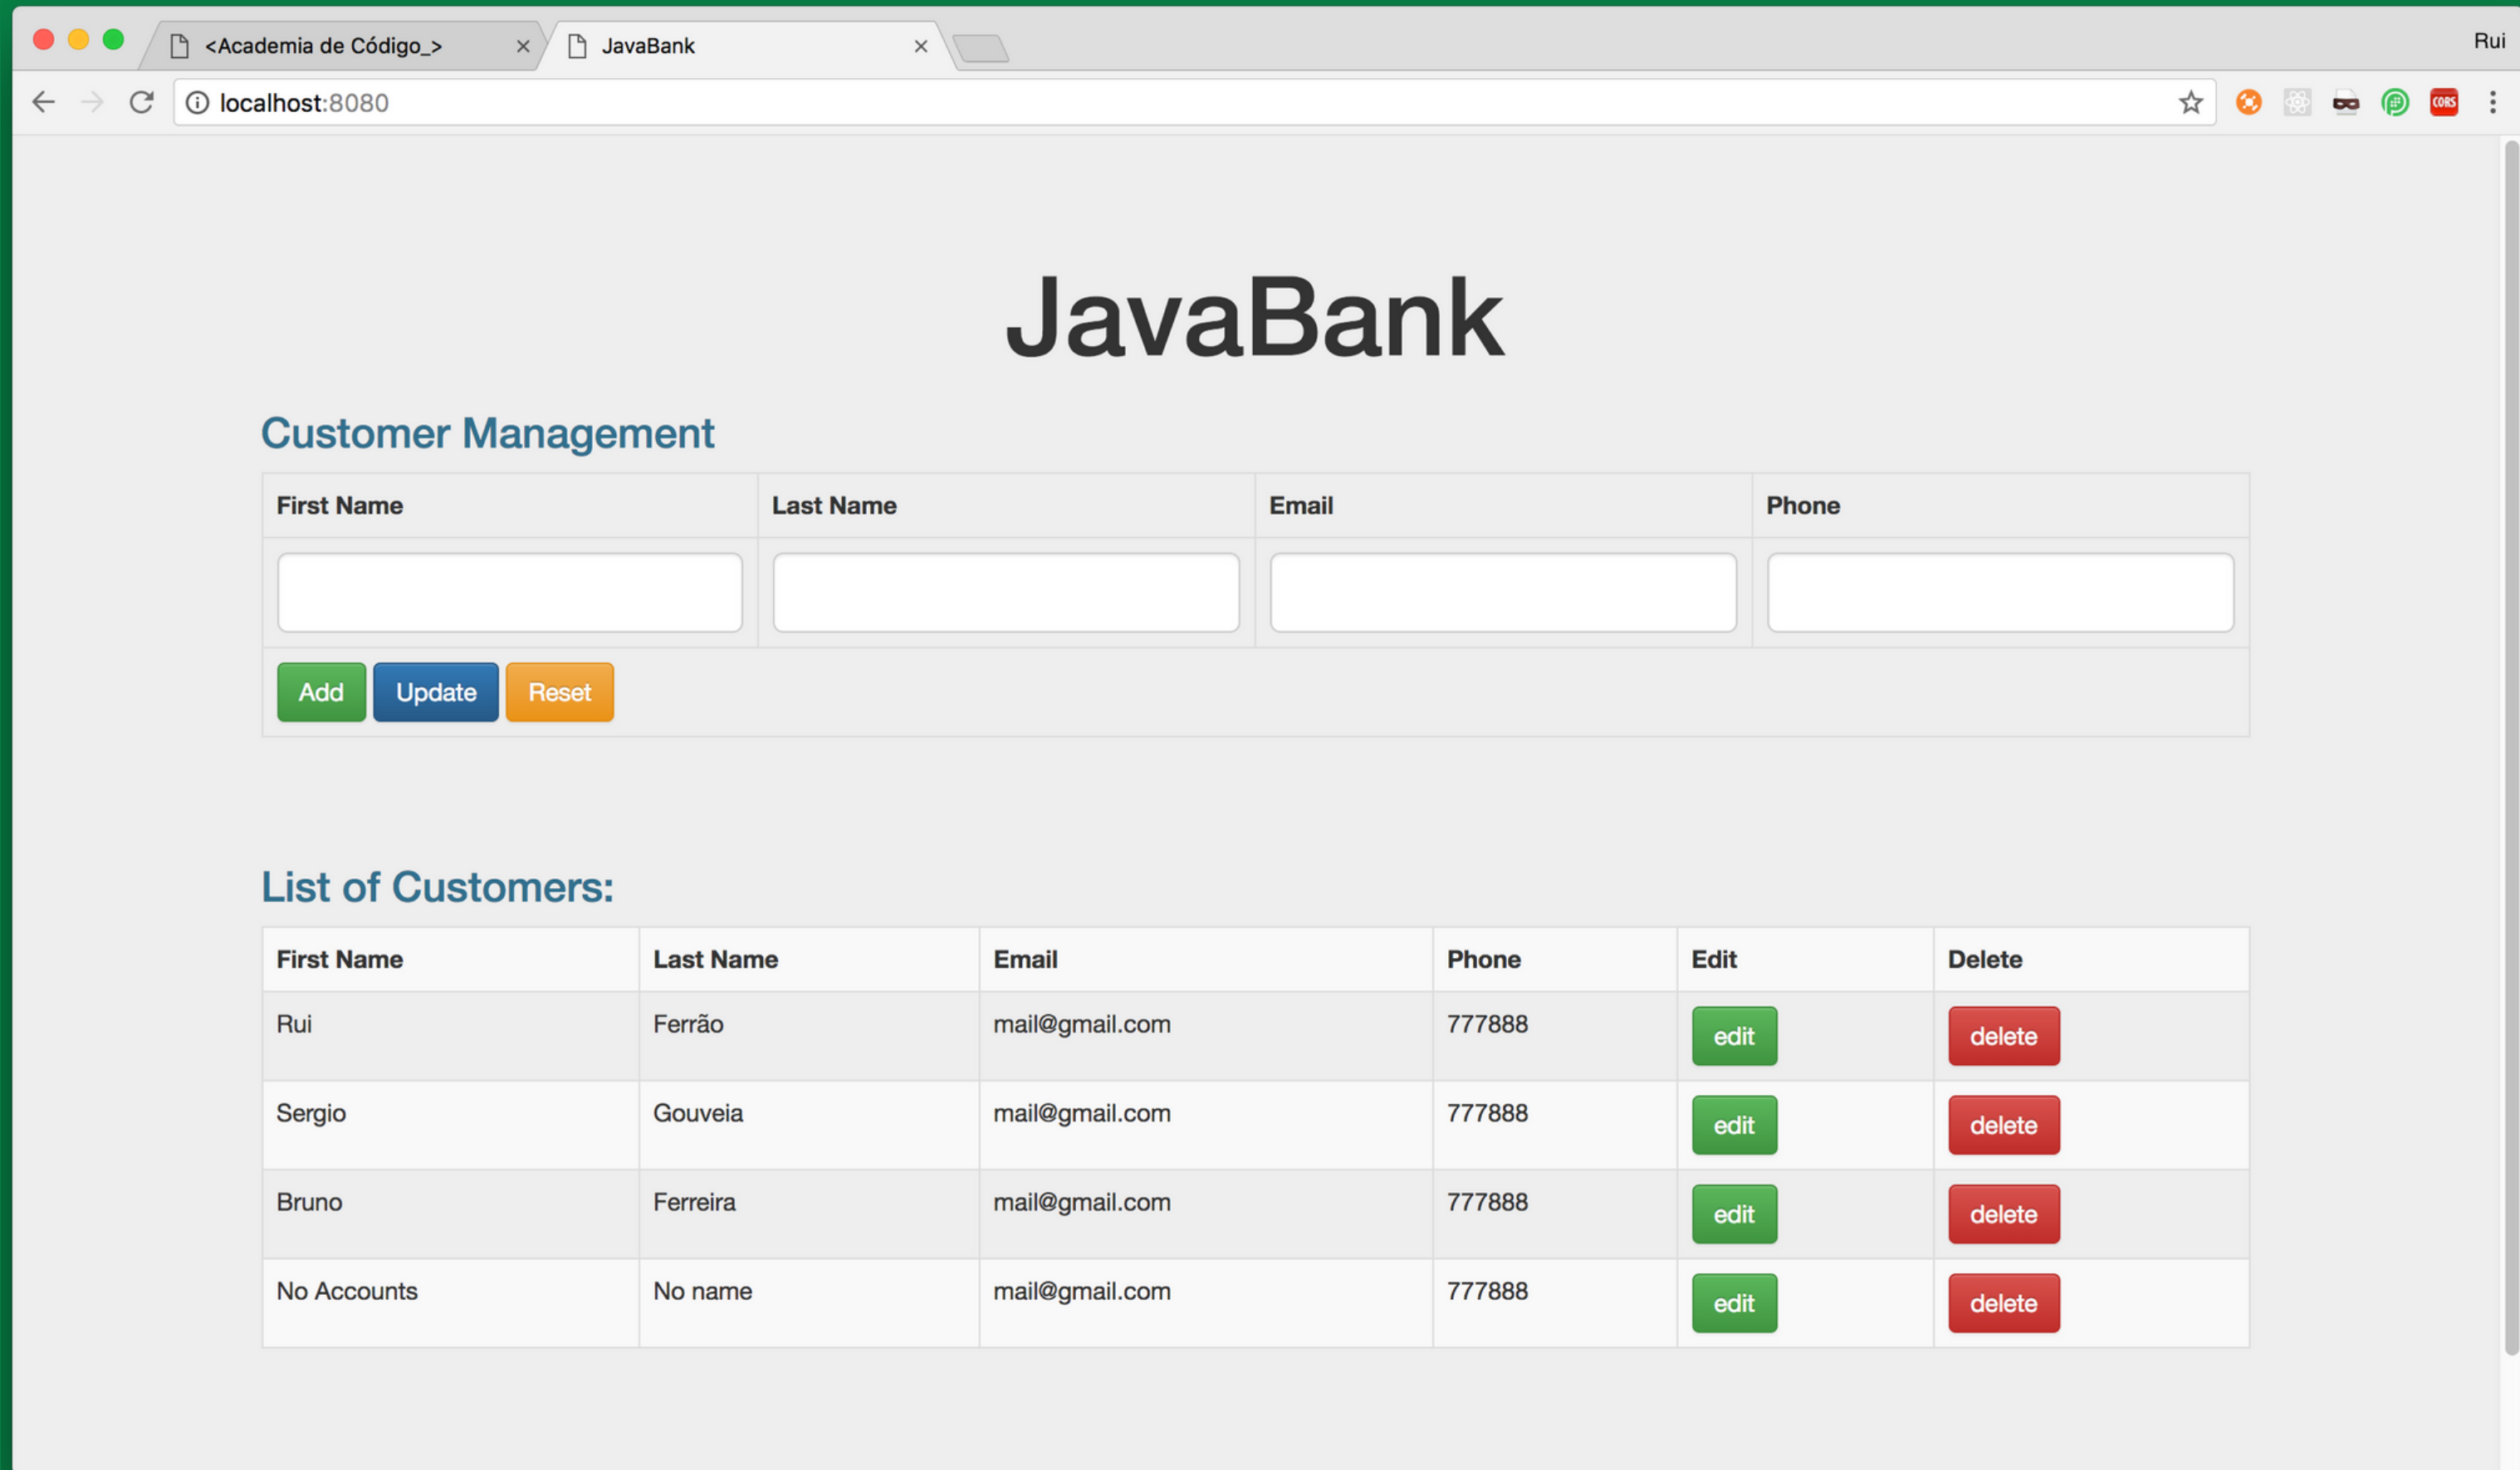

var customerTable = $('#customer-table');

$.each(customer, function(i, customer) {
    var row = '<tr>' +

        '<td>' + customer.firstName + '</td>' +
        '<td>' + customer.lastName + '</td>' +
        '<td>' + customer.email + '</td>' +
        '<td>' + customer.phone + '</td>' +
        '<td><button class="btn btn-warning edit-btn">Edit</button></td>' +
        '<td><button class="btn btn-danger delete-btn">Delete</button></td>' +
        '</tr>';

    $(row).appendTo(customerTable);
});
}

$.ajax({
    url: 'http://localhost:8080/javabank5/api/customer',
    async: true,
    success: successCallback,
    error: errorCallback
});
```

ADD

```
function successCallback(response) {
    getCustomer(response);
}

function errorCallback(request, status, error) {
    console.log("Error!")
}

$("#add-btn").click(function(){
    addCustomer()
    location.reload()

});

function addCustomer(){

$.ajax({
    url: 'http://localhost:8080/javabank5/api/customer',
    type: 'POST',
    data: JSON.stringify({
        firstName:$("#firstname").val(),
        lastName:$("#lastname").val(),
        email:$("#email").val(),
        phone:$("#phone").val()
    }),
    async: true,
    contentType: 'application/json',
    success: successCallback,
    error: errorCallback
});
}
```

EDIT

```
function errorCallback(request, status, error) {
    console.log("Error!")
}

function getCustomer(id){

$.ajax({
    url: 'http://localhost:8080/javabank5/api/customer/' + id,
    async: true,
    success: function(response){
        $("#firstname").attr("value",response.firstName),
        $("#lastname").attr("value",response.lastName),
        $("#email").attr("value", response.email),
        $("#phone").attr("value", response.phone)
    },
    error: errorCallback
});
}
```

```
'<td><button id="edit-btn" class="btn btn-warning edit-btn"
onclick="getCustomer( '+customer.id+' )">Edit</button></td>'
```

```
<td>
    <input
        value=""
        id="firstname"
        name="firstname"
        type="text"
        class="form-control input-lg"
        minlength="2"
        required
    />
</td>
```
